### The Invention of the Computer

One more important invention of our century is **the computer**. The first computer was invented by the English scientist **Charles Babbage**.

Nowadays nearly everything we do in the modern world is helped and controlled by computers. Computers are used so often because they are more **efficient** than human beings. They have better memories and can **store** a lot of information.

In fact, computers can do what we can do but faster and better. They can control different machines, foretell tomorrow's weather, even play chess and compose music. Computers are widely used in various professions. We can find computers everywhere: in a library, in a travel agency, in a hotel, in a shop and in many other places.

To be sure, the technical progress will not stop but the machines will not be able **to substitute** everything including the human being.

Odgovori na vprašanja. Answer the questions.

1. Who invented the first computer?
2. Are computer more efficient (bolj učinkovit) than human beings?
3. Why?
4. What can computers do?
5. Where can we find them?
6. Are computers going to substitute (nadomestiti) humans?
